

PANANGIPALLI SAI CHARAN

Salesforce Developer | Apex | LWC | Flow

Bengaluru, Karnataka | 8247547998 | panangipallisaiacharan@gmail.com
Portfolio | [GitHub](#)

PROFESSIONAL SUMMARY

Salesforce Developer with 4+ years of experience building and enhancing Salesforce applications using Apex, Lightning Web Components (LWC), Salesforce Flow, SOQL, and SOSL. Experienced in production application development, Apex trigger architecture, bulkified and governor-limit-aware solutions, Apex testing, Salesforce security and sharing model concepts, automation modernization, production troubleshooting, and reusable component development. Hands-on experience implementing large-file management solutions supporting files up to 16 GB using Amazon S3, REST APIs, pre-signed URLs, Named Credentials, AWS Lambda, LWC, and Apex. Experienced with Experience Cloud, Service Cloud, metadata-driven architecture, asynchronous Apex, Salesforce integrations, and Agile/Scrum delivery. Built Salesforce developer tools adopted by 100+ active users, including offline Apex visualization and Salesforce Flow analysis tools. 5x Salesforce certified.

CERTIFICATIONS

Salesforce Certified Administrator • Salesforce Certified Platform App Builder • Salesforce Certified Platform Developer I • Salesforce Certified AI Associate • Salesforce Certified AI Specialist

TECHNICAL SKILLS

Salesforce Development: Apex, Apex Classes, Apex Triggers, Apex Test Classes, Apex Unit Testing, Bulkification, Governor Limits, Asynchronous Apex, Future, Queueable, Batch Apex, Schedulable Apex, Lightning Web Components (LWC), Aura Components, SOQL, SOSL
Salesforce Platform: Service Cloud, Experience Cloud, Salesforce Flow, Omni-Channel, Approval Processes, Profiles, Permission Sets, Field-Level Security (FLS), Flexi Pages, Page Layouts, Metadata, Validation Rules, Salesforce Sharing Model, Organization-Wide Defaults (OWD), Sharing Rules, CRUD/FLS

Integration & Cloud: REST APIs, SOAP APIs, HTTP Callouts, JSON, XML, Amazon S3, Pre-signed URLs, Salesforce Named Credentials, AWS Lambda, Platform Events, Change Data Capture, Integration Error Handling

Architecture: FFLib Trigger Handler Framework, Object-Oriented Programming, Metadata-Driven Architecture, Reusable Components, with sharing / without sharing, scalable Salesforce application design

DevOps & Tools: Salesforce CLI, SFDX, Git, Copado, Metadata API, CI/CD, Visual Studio Code, JIRA, Maven, Agile, Scrum

Programming: JavaScript, Java, Python, HTML, CSS, Vanilla JavaScript

AI/ML: Transformer.js, OpenAI Whisper, NumPy, pandas, scikit-learn, Jupyter

PROFESSIONAL EXPERIENCE

Deloitte | Consultant — Salesforce Developer

Jul 2025 – Present | Bengaluru, India

- Develop and maintain custom and standard Lightning Web Components (LWC) across multiple Salesforce modules, delivering reusable UI solutions for complex business requirements.
- Implement Salesforce Flows to automate business processes and streamline application workflows as the project progresses toward production readiness.
- Develop and maintain Apex trigger logic using the FFLib Trigger Handler framework, applying bulkification, governor-limit considerations, reusable service patterns, and maintainable trigger architecture.
- Build and test Salesforce backend functionality using Apex, SOQL, and SOSL, integrating business logic with Lightning Web Components and declarative automation.
- Apply Salesforce security and access-control concepts including CRUD/FLS, sharing behavior, profiles, permission sets, and organization-level access considerations.
- Collaborate within an Agile development environment to analyze requirements, develop features, troubleshoot issues, and prepare the application for production deployment.
- Contribute to the final stages of development and stabilization of the Salesforce application ahead of its planned production release.

IBM | Application Developer

Aug 2022 – Jul 2025 | Bengaluru, India

- Developed and maintained 50+ Lightning Web Components (LWC) for a live Salesforce application, delivering reusable UI functionality across multiple business workflows.
- Built a Salesforce Experience Cloud site from scratch, implementing the site structure, user-facing functionality, and custom Salesforce components to support business requirements.
- Implemented 5–10 Salesforce Flows to automate business processes and improve operational efficiency across the production application.
- Migrated legacy Process Builder automations to Salesforce Flow, modernizing automation and improving maintainability of the live application.
- Implemented an end-to-end large-file management solution supporting files up to 16 GB, integrating Salesforce with Amazon S3 using REST APIs, pre-signed URLs, and Salesforce Named Credentials.
- Developed the AWS integration layer using JavaScript-based AWS Lambda functions and REST APIs, while implementing Salesforce-side LWC and Apex controllers for file upload, download, and file-sharing functionality.
- Implemented integration error handling and exception-management mechanisms across Salesforce and external services, enabling controlled failure handling and improving application reliability.
- Developed reusable and bulkified Apex functionality using SOQL and SOSL, with Apex test coverage and governor-limit considerations for production workloads.
- Worked with Salesforce security and access-control mechanisms including profiles, permission sets, CRUD/FLS, sharing behavior, and record-access considerations.
- Diagnosed and resolved multiple production issues through root-cause analysis and targeted fixes, maintaining application stability and business continuity.
- Worked within Agile/Scrum methodologies across requirements analysis, development, testing, production support, troubleshooting, deployment, and delivery of Salesforce enhancements.

SELECTED PROJECTS

ApexViz — Apex Code Visualization VS Code Extension

- Built an offline VS Code extension using vanilla JavaScript to parse Apex code and convert program logic into structured, flowchart-style diagrams similar to Salesforce Flows.
- Integrated an ANTLR4-based Apex grammar for Apex syntax parsing and implemented visualization of loops, conditional statements, method calls, SOQL, DML, exception handling, variable operations, control statements, and return statements.

- Generated Mermaid flowchart syntax and rendered diagrams directly within VS Code, enabling developers to visually understand complex Apex execution flows.

Salesforce Flow Analyzer — Offline Browser Extension

- Built a fully offline browser extension using vanilla JavaScript to analyze Salesforce Flow XML locally and identify 12 best-practice, security, governor-limit, maintainability, documentation, and performance issues before deployment.
- Implemented a rule-based analysis engine with 4 severity levels across 6 categories, including detection of hardcoded record IDs, SOQL/DML in loops, missing fault paths, missing null checks, excessive Flow complexity, and outdated API versions.
- Designed privacy-first local processing with no external data transmission or collection, and built CSV result export and an integrated Rules Book for reviewing analysis rules.
- Published the extension for Google Chrome and Microsoft Edge.

RulesForge — Domain-Specific Expression Engine

- Built a domain-specific expression language from scratch for metadata-driven Salesforce validation, implementing a custom lexer, parser, and execution engine entirely in Apex and vanilla JavaScript, without third-party libraries.
- Designed the engine to interpret configurable business expressions dynamically, enabling validation logic to be defined through metadata rather than hardcoded Apex rules.

Salesforce Developer Tools & AI/Automation

- Built and maintained a suite of Salesforce developer productivity tools adopted by 100+ active users, spanning Apex visualization, Flow analysis, and metadata-driven validation.
- Developed additional Salesforce solutions using LWC, Apex, Flow, JavaScript, Transformer.js, and OpenAI Whisper, including voice-based Salesforce navigation, QR-based case creation, document management, and workflow automation.

EDUCATION

SASTRA University

B.Tech — Electrical and Electronics Engineering | 2022 | CGPA: 8.20
